Happy New Year!

America got its promised great big Christmas gift just before the holidays with the freshly signed "Tax Cut and Jobs Act". Will you win or will you lose as a result? It will depend on your financial and family situation and how you earn your income. The rush to pass this through Congress means that there is a lot that's not yet understood. A bit of mystery for our new year!

Markets have held their own even after the tax law became reality and many commentators are optimistic about the coming years. That alone should be cause for concern. As always, I'll watch and take my cues from the markets.

By the time you get your next newsletter in early February, we'll be safely installed in our winter residence on the Gulf Coast. My knee replacement surgery late last month went well, as is my rehabilitation... thanks for all your good wishes. I look forward to walking the Gulf beaches soon.
Stay safe and warm in the New Year!

Planning Tips for Today and the Rest of Your Life

How Much Risk Can You Take?

Many market shocks are short-lived once investors conclude the event is unlikely to cause lasting economic damage. Still, major market downturns such as the 2000 dot-com bust and the 2008-09 credit crisis are powerful reminders that we cannot control or predict exactly how, where, or when precarious situations will arise.

Market risk refers to the possibility that an investment will lose value because of a broad decline in the financial markets, which can be the result of economic or sociopolitical factors. Investors who are willing to accept more investment risk may benefit from higher returns in the good times, but they also get hit harder during the bad times. A more conservative portfolio generally means there are fewer highs, but also fewer lows.

Your portfolio's risk profile should reflect your ability to endure periods of market volatility, both financially and emotionally. Here are some questions that may help you evaluate your personal relationship with risk.

How much risk can you afford?

Your capacity for risk generally depends on your current financial position (income, assets, and expenses) as well as your age, health, future earning potential, and time horizon. Your time horizon is the length of time before you expect to tap your investment assets for specific financial goals. The more time you have to keep the money invested, the more likely it is that you can ride out the volatility associated with riskier investments. An aggressive risk profile may be appropriate if you're investing for a retirement that is many years away. However, investing for a teenager's upcoming college education may call for a conservative approach.

How much risk may be needed to meet your goals?

If you know how much money you have to invest and can estimate how much you will need in the future, then it's possible to calculate

a "required return" (and a corresponding level of risk) for your investments. Older retirees who have sufficient income and assets to cover expenses for the rest of their lives may not need to expose their savings to risk. On the other hand, some risk-averse individuals may need to invest more aggressively to accumulate enough money for retirement and offset another risk: that inflation could erode the purchasing power of their assets over the long term.

How much risk are you comfortable taking?

Some people seem to be born risk-takers, whereas others are cautious by nature, but an investor's true psychological risk tolerance can be difficult to assess. Some people who describe their personality a certain way on a questionnaire may act differently when they are tested by real events.

Moreover, an investor's attitude toward risk can change over time, with experience and age. New investors may be more fearful of potential losses. Investors who have experienced the cyclical and ever-changing nature of the economy and investment performance may be more comfortable with short-term market swings.

Brace yourself

Market declines are an inevitable part of investing, but abandoning a sound investment strategy in the heat of the moment could be detrimental to your portfolio's long-term performance. One thing you can do to strengthen your mindset is to anticipate scenarios in which the value of your investments were to fall by 20% to 40%. If you become overly anxious about the possibility of such a loss, it might be helpful to reduce the level of risk in your portfolio. Otherwise, having a plan in place could help you manage your emotions when turbulent times arrive.

All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.

Infographic: Financial Tips for Young Adults

6 Steps for Young Adults to Build a Financial Foundation

1 Create a budget

Subtract your monthly living expenses (e.g., rent, food, utilities) and loan payments (e.g., student and/or auto loans) from your monthly income to see how much you'll have left over each month to save or invest.

2 Build an emergency fund

Stash away a small amount from each paycheck until you have a few thousand dollars built up that you can access in the event of a financial emergency.

3 Pay your bills on time

Automate payments with online bill pay. If you run into financial difficulty, be proactive and contact your lender before you miss a payment.

4 Use credit wisely

Avoid racking up unnecessary credit card debt and pay off your bill in full each month. If you can't, don't use your credit card.

5 Contribute to a Roth IRA and/or workplace 401(k)

Time is your friend. Start saving for retirement now, and your older self will thank you. Consider starting with 3% of your pay and increase from there.

6 Live within your means

Forget about what others are doing and set your own financial rules and goals. Live your best life by striving to live within (or below) your means.

Don't Delay: The Potential Benefits of Starting to Save Now

For long-term investment goals such as retirement, time can be one of your biggest advantages. That's because time allows your investment dollars to do some of the hard work for you through a mathematical principle known as compounding.

The snowball effect

The premise behind compounding is fairly simple. You invest to earn money, and if those returns are then reinvested, that money can also earn returns.

For example, say you invest \$1,000 and earn an annual return of 7% — which, of course, cannot be guaranteed. In year one, you'd earn \$70 and your account would be worth \$1,070. In year two, that \$1,070 would earn \$74.90, which would bring the total value of your account to \$1,144.90. In year three, your account would earn \$80.14, bringing the total to \$1,225.04 — and so on. Over time, if your account continues to grow in this manner, the process can begin to snowball and potentially add up.

Time and money

Now consider how compounding works over long time periods using dollar-cost averaging (investing equal amounts at regular intervals), a strategy many people use to save for retirement.¹ Let's say you contribute \$120 every two weeks. Assuming you earn a 7% rate of return each year, your results would look like this:

Time period	Amount invested	Total accumulated
10 years	\$31,200	\$45,100
20 years	\$62,400	\$135,835
30 years	\$93,600	\$318,381

After 10 years, your investment would have earned almost \$14,000; after 20 years, your money would have more than doubled; and after 30 years, your account would be worth more than three times what you invested.² That's the power of compounding at work. The longer you invest and allow the money to grow, the more powerful compounding can become.

The cost of waiting

Now consider how much it might cost you to *delay* your investing plan. Let's say you set a goal of accumulating \$500,000 before you retire. The following scenarios examine how much you would have to invest on a monthly basis, assuming you start with no money and earn a 7% annual rate of return (compounded monthly).

Time frame to retirement	40 years	35 years	30 years	25 years
Retirement accumulation goal	\$500,000	\$500,000	\$500,000	\$500,000
Annual rate of return	7%	7%	7%	7%
Monthly contribution needed	\$190	\$278	\$410	\$617

So the less time you have to pursue your goal, the more you will likely have to invest out of pocket. The moral of the story? Don't put off saving for the future. Give your investment dollars as much time as possible to do the hard work for you.

¹ Dollar-cost averaging does not ensure a profit or prevent a loss. It involves continuous investments in securities regardless of fluctuating prices. You should consider your financial ability to continue making purchases during periods of low and high price levels. All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful. Review your progress periodically and be prepared to make adjustments when necessary.

² Assumes 26 contributions per year, compounded bi-weekly.

These hypothetical examples are used for illustrative purposes only and do not represent the performance of any specific investment. Fees and expenses are not considered and would reduce the performance shown if they were included. Actual results will vary. Rates of return will vary over time, particularly for long-term investments. Investments with the potential for higher rates of return also carry a greater degree of risk of loss.

Heling Associates, Inc. is a fee-only financial and investment advisory firm that has been providing financial planning, financial counseling, and portfolio management services since 1991. The firm is registered as an investment advisor with the Department of Financial Institutions of the State of Wisconsin. If you've been thinking about seeking help from an objective and professional financial advisor, we welcome your inquiry.

While every effort has been made to ensure that information and data presented in this publication is accurate, we cannot, in fact, assure such accuracy is achieved. While publications may, on occasion, mention specific securities and investment vehicles, readers are advised that such mention does not constitute an investment recommendation. You should only invest after consulting us or another professional financial advisor who can assist you in determining your goals, risk capacity, and risk tolerance.

What can I do to crack down on robocalls?

You may not mind if a legitimate robocall provides a helpful announcement from your child's school or an appointment reminder from a doctor's office. But sadly, criminals often use robocalls to collect consumers' personal information and/or conduct various scams. Newer "spoofing" technology displays fake numbers to make it look as though calls are local, rather than coming from overseas, which could trick more people into answering the phone.

Robocalls have been illegal since 2009 (unless the telemarketer has the consumer's prior consent). In mid-2017, federal agencies announced they are ramping up enforcement by fining violators and encouraging blocking technologies. What should you do if you want to help put an end to this nuisance?

1. Don't answer calls when you don't recognize the phone number. If you pick up an unwanted robocall, just hang up. Don't answer "yes" or "no" questions, provide personal information, or press a number to

"opt out." Responding to the call in any way verifies that it has reached a real number and could prompt additional calls.

2. Look into robocall blocking solutions that may be offered by your phone service provider. If they're available, you may need to follow specific instructions to "opt in." Otherwise, consider a mobile app or cloud-based service designed to block robocalls; some of them are free or cost just a few dollars.
3. Consider registering your phone number on the National Do Not Call Registry. While taking this step can help mitigate the amount of robocalls you receive, it's only a partial solution to the problem. The Federal Trade Commission advises consumers whose numbers are on the registry but still receive unwanted calls to report robocall violations at complaints.donotcall.gov. The phone numbers provided by consumers will be released each day to companies that are working on call-blocking technologies, which largely depend on "blacklists" with numbers associated with multiple complaints.

How can I protect myself from digital deception?

Imagine that you receive an email with an urgent message asking you to verify your banking information by clicking on a link. Or maybe you get an enticing text message claiming that you've won a free vacation to the destination of your choice — all you have to do is click on the link you were sent. In both scenarios, clicking on the link causes you to play right into the hands of a cybercriminal seeking your sensitive information. Just like that, you're at risk for identity theft because you were tricked by a social engineering scam.

Social engineering attacks are a form of digital deception in which cybercriminals psychologically manipulate victims into divulging sensitive information. Cybercriminals "engineer" believable scenarios designed to evoke an emotional response (curiosity, fear, empathy, or excitement) from their targets. As a result, people often react without thinking first due to curiosity or concern over the message that was sent. Since social engineering attacks appear in many forms and appeal to a variety of emotions, they can be especially difficult to identify.

Take steps to protect yourself from a social engineering scam. If you receive a message conveying a sense of urgency, slow down and read it carefully before reacting. Don't click on suspicious or unfamiliar links in emails, text messages, and instant messaging services. Hover your cursor over a link before clicking on it to see if it will bring you to a real URL. Don't forget to check the spelling of URLs — any mistakes indicate a scam website. Also be sure to look for the secure lock symbol and the letters *https*: in the address bar of your Internet browser. These are signs that you're navigating to a legitimate website.

Never download email attachments unless you can verify that the sender is legitimate. Similarly, don't send money to charities or organizations that request help unless you can follow up directly with the charitable group.

Be wary of unsolicited messages. If you get an email or a text that asks you for financial information or passwords, do not reply — delete it. Remember that social engineering scams can also be used over the phone. Use healthy skepticism when you receive calls that demand money or request sensitive information. Always be vigilant and think before acting.
